

Cloudflare Setup Guide

Official instructions from developers.cloudflare.com/agent-setup/prompt.md

Fetches August 10, 2026 | All commands validated by Cloudflare

ORIGINAL PROMPT

You said:

Fetch and execute the appropriate instructions to set me up for Cloudflare from <https://developers.cloudflare.com/agent-setup/prompt.md>

These are official Cloudflare instructions for setting up AI development on the Cloudflare platform. Since this project runs on Replit Agent, use the "Install for other agents" section below.

A. INSTALL CLOUDFLARE SKILLS (Replit / Other Agents)

Run this command to install all Cloudflare skills globally in your agent environment:

```
npx -y skills add cloudflare/skills --skill '*' --yes --global
```

This gives your agent access to Cloudflare-specific knowledge, commands, and deployment helpers.

B. REGISTER CLOUDFLARE MCP SERVERS

Add the following entries under "mcpServers" in your agent's MCP config file (e.g. `.cursor/mcp.json`, `.vscode/mcp.json`, or your agent's equivalent):

```
"cloudflare": { "url": "https://mcp.cloudflare.com/mcp" }
"cloudflare-docs": { "url": "https://docs.mcp.cloudflare.com/mcp" }
"cloudflare-bindings": { "url": "https://bindings.mcp.cloudflare.com/mcp" }
"cloudflare-builds": { "url": "https://builds.mcp.cloudflare.com/mcp" }
"cloudflare-observability": { "url": "https://observability.mcp.cloudflare.com/mcp" }
```

OAuth triggers automatically on the first Cloudflare tool use. The `cloudflare-docs` server is public and requires no authentication.

C. WHAT EACH MCP SERVER DOES

cloudflare	Core Cloudflare API — manage Workers, Pages, DNS, accounts
cloudflare-docs	Search official Cloudflare documentation (no auth needed)
cloudflare-bindings	Manage R2 buckets, KV namespaces, D1 databases, Queues
cloudflare-builds	Trigger and monitor Cloudflare Pages & Workers builds
cloudflare-observability	View logs, analytics, and error traces for your deployments

D. COMPLETION CONFIRMATION

Once skills and MCP servers are installed, restart your agent. You should see a confirmation like this:

```
Cloudflare Agent Setup Complete
| Skills      installed globally
| MCPs       registered in config
&i Restart your agent to load MCP servers
```

Cloudflare API MCP (Code Mode)	github.com/cloudflare/mcp
Other Cloudflare MCP Servers	github.com/cloudflare/mcp-server-cloudflare
Cloudflare Skills	github.com/cloudflare/skills
Cursor MCP Docs	cursor.com/docs/mcp
VS Code / GitHub Copilot MCP	code.visualstudio.com/docs/copilot/customization/mcp-servers

FULL PROJECT TOPIC SUMMARY

Brandon Boyd Website — Every Prompt, Every Feature

Creative Coders LLC | From Day One to Today | August 10, 2026

This document organises every topic and feature you prompted — from the very first day of development through today. Each category is broken into sub-topics so you can see exactly what was discussed, built, and planned.

PROJECT STATS AT A GLANCE

- Completed (Merged): 37 tasks
- Superseded / Cancelled: 37 tasks
- Planned (Proposed): 10 tasks
- Total Tasks: 84 | Categories: 15

- | | | |
|--------------------------------------|--|---|
| Done (Merged)
Live on the website | Planned (Proposed)
Approved, ready to build | Superseded / Cancelled
Replaced by better approach |
|--------------------------------------|--|---|

1. Project Setup & Foundation

Initial Project Import

- #1 — Set up the imported project in Replit and get it running

Build System Stability

- #2 — Prevent silent install breakages from the tsx registry block
- #16 — Fix broken TypeScript type check blocking reliable homepage builds

2. Admin Authentication & Login

Google OAuth Setup

- #7 — Confirm admin login works on the live site
- #9 — Confirm admin Google login works on the live site
- #10 — Prevent locked-out admins when Google OAuth credentials expire or rotate
- #15 — Enable Google sign-in on live admin site (add redirect URI in Google Cloud)

Dev vs Production Login Separation

- #8 — Sign in to admin panel without Google in dev environment
- #14 — Catch the "dev admin bounces to production" regression before it ships

Session Integrity & Automated Testing

- #11 — Confirm login still works after any future Worker deployment
- #12 — Run auth tests automatically on every code push
- #13 — Catch a broken session check before it locks out all admins

3. AI Chat Assistant

Initial Setup Attempts (Cloudflare)

- #3 — Let homeowners book and track services from their phone via AI chat
- #4 — Turn on AI chat by connecting your Cloudflare account
- #5 — Switch AI chat to Cloudflare Workers AI once token permissions were fixed
- #6 — Turn on AI chat assistant in the dev preview

AI Model Upgrade

- #29 — Upgrade from gpt-4o-mini to gpt-5.4-mini for better responses

Smart Content Integration

#76 — Pull live services, FAQs & settings into AI chat prompt automatically

4. Booking System

% Customer-Facing Booking Flow

- #19 — Show specific time in booking confirmation emails
- #20 — Make sure booking confirmations cannot send without a reachable email
- #21 — Show confirmed time clearly on the customer-facing booking status page
- %É #23 — Show full confirmed booking details on the customer-facing status page

% Admin Phone Booking Entry

- #22 — Admin phone booking entry — let Brandon add bookings by phone
- %É #25 — Make sure phone bookings survive edge cases without silent failures

% Double-Booking Prevention

- #44 — Prevent phone-booking dialog from accepting a fully booked date
- %É #24 — Catch double-bookings before they reach the schedule
- %É #51 — Prevent owner from double-booking a time window from the API level

% Data Validation & API Error Handling

- #42 — Catch malformed bookings in the API before they reach the database
- #43 — Handle a mix of valid and invalid booking rows gracefully in tests
- #45 — Make sure bookings page works correctly when API returns an empty list
- #46 — Confirm booking API rejects bad data with automated tests
- #47 — Use consistent 422 validation errors across all booking write endpoints
- #48 — (Duplicate) Bookings page works with empty API response
- #77 — Stop invalid phone numbers from being saved in admin edits & settings

% Customer Notifications & Extras

- #55 — Add appointment reminder email so customers don't forget bookings
- #56 — Let Brandon print or export his weekly schedule as a PDF
- %É #63 — Keep booking form's service dropdown in sync with admin-managed services
- #75 — Confirm booking form auto-dismiss still works after future form changes

5. Calendar & Schedule Management

% Daily Schedule View

- #26 — Daily calendar view with 30-minute slots for the admin panel
- #52 — Confirm calendar view still works correctly when there are no bookings

% Booking Visibility on Calendar

- %É #33 — Show which days have bookings so owner can jump to them faster

% Job Details on Bookings

- %É #34 — Let owner add notes or a job address to a confirmed booking

6. Admin Panel Features

% Crash Fixes & Page Stability

- #37 — Fix runtime crash on the Bookings admin page
- #40 — Prevent Bookings page from going blank when booking data is missing
- #41 — Confirm Bookings page loads correctly with real data after crash fix
- #49 — Prevent a crash in one admin tab from blanking the entire admin panel

% Service Management

- #61 — Let owner edit service descriptions without touching code
- #62 — Keep CTA button labels consistent when copy changes
- %É #64 — Prevent homepage service colors from scrambling when reordered

% Reviews Moderation

- #83 — Add Reviews moderation tab to admin panel
- #84 — Notify Brandon by email when a new review is waiting for approval

7. SEO & Online Discoverability

% Local SEO for Northern Atlanta Metro

- #27 — Local SEO & AI search visibility for the Northern Atlanta Metro area
- %É #35 — Connect real Thumbtack & TaskRabbit profile links for Google verification

% Structured Data & Review Markup

- %É #36 — Mark up homepage reviews so Google can show them in search results
- #78 — Expand search and AI discoverability signals across the site

% Social Media Preview Cards

- #79 — Make the site look polished when shared on social media
- #80 — Regenerate social preview image if Brandon's ratings or job count changes

% Google Search Console (GSC) Setup

- #81 — Update internal GSC agency reference PDF with detailed steps
- #82 — Give Brandon screen-by-screen GSC steps to verify without the agency

&j 8. Performance & Lighthouse Score

% Lighthouse 100 Score

- #28 — Lighthouse 100 — performance, accessibility & best practices achieved

% Image Optimisation

- %É #30 — Serve gallery & before/after images in WebP to cut photo load time
- #66 — Serve hero photo at mobile resolution to cut phone page load time

% Font Loading

- %É #31 — Self-host Google Fonts to remove third-party font dependency

9. Mobile User Experience

% Mobile Navigation Drawer

- #65 — Add a mobile navigation drawer so users can jump to any section
- #68 — Make mobile nav drawer close when tapping the overlay or pressing Escape
- #69 — Add a 'FAQ' link to the mobile nav drawer
- #72 — Add 'Book a Service' link to the mobile nav drawer

% Reviews Carousel on Mobile

- #67 — Show visual scroll indicators on the reviews carousel
- #70 — Let customers tap a dot to jump directly to a specific review
- #71 — Confirm new reviews appear as dots immediately after submission

+P 10. Customer Reviews

% Review Submission Experience

- #73 — Apply 10-second auto-dismiss and close button to review confirmation toast
- #74 — Confirm review form auto-dismiss works correctly after future form changes

% Admin Review Management

- #83 — Add Reviews moderation tab so Brandon can approve or reject reviews
- #84 — Notify Brandon by email when a new review is waiting for his approval

'p 11. Website Content & Copywriting

% About & Services Section Refresh

- #57 — Refresh About Brandon and Services sections with stronger copy & tighter design
- #59 — Apply the same copy-and-design refresh to the FAQ and Testimonials sections
- #60 — Keep the About section proof numbers (years, jobs) from going stale

% Call-to-Action (CTA) Consistency

- #58 — Make every call-to-action button use the same label across the whole site
- #62 — Keep CTA button labels consistent when copy changes in future

Ø=Ý¼p 12. Dev Environment & Media Sync

% Production Image Sync to Dev

- #17 — Bring production images into dev so synced data doesn't show broken pictures
- #18 — Show a fallback image instead of broken pictures when a dev image is missing

Ø=Ý 13. Release Workflow & DevOps

% Git Branching Strategy

- #32 — Set up Git branching & release workflow (develop !' main)
- %É #38 — Protect main branch from direct pushes so only releases can update it

% Release Script

- %É #39 — Verify the release script end-to-end with a test dry-run mode
- #53 — Let the release script push version tags to GitHub automatically

% Dev Preview Integrity

- #50 — Keep the dev preview correct automatically after task agents ship new code

Ø=ÜÖ 14. Documentation & Owner Guides

% Website Owner Guide

- #54 — Write Brandon's website owner guide with screenshots

% Google Search Console (GSC) Reference

- #81 — Update internal GSC agency reference PDF with detailed steps
- #82 — Give Brandon screen-by-screen GSC steps so he can verify independently

Ø=ÜÄ 15. Legal Agreement (Today's Session)

% Website Development Agreement (Part I)

- Scope of Work — agreed features only; out-of-scope items excluded
- Payment Terms — 25% (\$500 paid ') + 75% (\$1,500 due upon signing)
- Delivery Date — August 10, 2026; website live and ready
- Acceptance — 5-business-day review window after delivery
- Changes After Delivery — billable extras after 10-day window

% Liability & Legal Protections

- Liability cap — capped at total amount paid (\$2,000)
- Business loss disclaimer — no liability for lost revenue, profits, or customers
- Dispute resolution — binding arbitration, Cherokee County, GA (AAA rules)
- Jury trial waiver by both Parties

% Intellectual Property & Domain Transfer

- IP assigned to client upon full payment
- Domain & source code transfer — only when client leaves for another agency
- Transfer requires all outstanding balances paid first
- Up to 2 hours of free handoff assistance included

% Maintenance Agreement (Part II — Auto-Activated by Signing)

- Monthly fee: \$20.00/month — begins September 1, 2026
- Covers: keeping site live, monitoring, downtime response
- Excludes: bug fixes, new features, content updates, third-party outages
- 10 common website issues explicitly protected (hacking, outages, SEO drops, etc.)
- Cancellation: 30 days written notice from either Party
