

Penny Lane Home Solutions

Google Indexing Setup · Agency Internal Reference v2

Creativecoders LLC · creativecoderstech@gmail.com · Client: brandon.boyd.po@gmail.com

QUICK LINKS

• [Google Search Console](#)

• [Google Business Profile](#)

• [Cloudflare DNS](#)

• [GSC Coverage report](#)

• [URL Inspection tool](#)

OWNERSHIP RULE: Brandon owns GSC and GBP under brandon.boyd.po@gmail.com. Agency is added as Manager/Owner only. Agency NEVER clicks Verify — Brandon does that himself from his own Google account.

SETUP STEPS — WHO DOES WHAT

Step	Who	Action summary	Status
1 · GSC property	Brandon	Open search.google.com/search-console/welcome under his Google account !' Add property !' Domain type !' pennylanehomesolutions.com	&
2 · TXT record	Agency	Receive TXT value from Brandon !' add DNS record in Cloudflare !' notify Brandon	&
3 · Verify & grant access	Brandon	Return to GSC !' click Verify !' Settings !' Users !' Add creativecoderstech@gmail.com as Owner	&
4 · GBP listing	Brandon	business.google.com/create !' create or claim listing under his account !' grant Agency Manager access	&
5 · Sitemap submit	Agency	GSC !' Sitemaps !' paste https://pennylanehomesolutions.com/sitemap.xml !' Submit	&
6 · Request indexing	Agency	GSC !' URL Inspection !' enter homepage URL !' Request Indexing	&
7 · Ongoing monitoring	Agency	Weekly Coverage check; monthly Core Web Vitals; flag issues to Brandon	&

STEP 2 — ADD THE GOOGLE VERIFICATION TXT RECORD IN CLOUDFLARE

Wait for Brandon first.

Brandon must open GSC and copy the TXT verification value before you can do this step.

1. Receive the TXT value from Brandon.

He will share a string like: google-site-verification=AbCdEf1234567890XXXXXXXXXXXXXXXXXXXXXXXXXXXX

2. Log in to Cloudflare.

Go to dash.cloudflare.com ! sign in with the Creativecoders Cloudflare account.

3. Open the DNS settings for pennylanehomesolutions.com.

Left sidebar ! Websites ! click pennylanehomesolutions.com ! click "DNS" in the left menu ! "Records" tab.

4. Click "Add record" and fill in the following fields exactly:

Type	: TXT
Name	: @ (the @ symbol represents the root domain)
Content	: google-site-verification=<paste the value Brandon sent>
TTL	: Auto
Proxy	: OFF !• click the orange cloud icon so it turns GREY (DNS-only)

5. Click Save.

The record appears in the list within a few seconds. Confirm it shows Type=TXT and the proxy cloud is grey.

6. Notify Brandon immediately.

Send him a message: "TXT record added in Cloudflare — you can go back to Google Search Console and click Verify now." DNS propagation is usually instant through Cloudflare but can take up to a few minutes globally.

Do NOT click Verify in GSC yourself. That action must come from Brandon's logged-in session.

STEP 3 (AGENCY SIDE) — CONFIRM GSC PROPERTY ACCESS

After Brandon verifies and grants access, confirm the property is visible in the agency account:

1. Sign in to search.google.com/search-console with creativecoderstech@gmail.com.

2. Click the property selector dropdown (top-left, shows current property name).

Look for "pennylanehomesolutions.com" in the list. If it appears, access is confirmed.

3. If the property is missing,

Ask Brandon to go to GSC ! Settings (gear icon) ! Users and permissions ! confirm creativecoderstech@gmail.com is listed with Owner permission. If it is not there, have him add it again.

4. Once the property loads, check the Overview page.

It may show "Data is processing" for the first 24–48 hours — this is normal. No action needed.

STEP 4 (AGENCY SIDE) — VERIFY GBP MANAGER ACCESS

1. After Brandon creates or claims his Google Business Profile,

He will invite creativecoderstech@gmail.com as a Manager. Watch for an email invitation from Google.

2. Accept the invitation from the email,

or go to business.google.com ! click the notification bell ! accept pending invitation for Penny Lane Home Solutions.

3. Confirm access by opening business.google.com.

Penny Lane Home Solutions should appear in the business list. Click it to confirm the profile is editable.

STEP 5 — SUBMIT THE SITEMAP IN GOOGLE SEARCH CONSOLE

Do this as soon as GSC property access is confirmed (Step 3 above).

1. **Open GSC and select the pennylanehomesolutions.com property.**
2. **In the left sidebar, scroll down to "Indexing" !' click "Sitemaps".**
3. **In the "Add a new sitemap" field, paste exactly:**

```
sitemap.xml
```

GSC auto-prepends the domain, so the full URL it tests will be <https://pennylanehomesolutions.com/sitemap.xml>

4. **Click "Submit".**
The sitemap row appears in the table with Status "Success" and shows the number of URLs discovered (should be 1 for this single-page site). This can take a few minutes to process.
5. **If status shows an error:**
 - "Couldn't fetch" !' verify the site is live at pennylanehomesolutions.com and the sitemap loads at that URL
 - "Has errors" !' click through to see which URLs are flagged; most common cause is a mismatched canonical URL

Success looks like: Status column shows a green "Success" label and Discovered URLs shows 1.

STEP 6 — REQUEST INDEXING VIA URL INSPECTION

1. **In GSC, open the "URL Inspection" tool (left sidebar or top search bar).**
2. **In the URL bar at the top of the page, type or paste:**

```
https://pennylanehomesolutions.com/
```

3. **Press Enter. GSC runs a live test and shows the URL's current status.**
It will say either "URL is on Google" (already indexed), or "URL is not on Google" (needs indexing request).
4. **Click the "Request Indexing" button.**
A spinner runs for 10–20 seconds while Google checks the page. When it finishes, a dialog says "Indexing requested" — click Got it.
5. **Note: this is a request, not an immediate guarantee.**
Google typically crawls and indexes the page within 1–7 days. If the page is not indexed after 2 weeks, re-submit and check the Coverage report for any crawl errors.

STEP 7 — ONGOING POST-SETUP MONITORING

Once setup is complete, check in regularly to catch issues before they affect ranking.

Weekly — Coverage check (5 min)

- GSC !' Indexing !' Pages. Look for any increase in "Not indexed" errors.
- Click into "Why pages aren't indexed" to see error types. Common ones: Crawled but not indexed (normal for new sites), or Redirect error (needs fixing).
- If new errors appear, note the affected URLs and flag to Brandon if content changes are needed.

Monthly — Core Web Vitals + Performance (15 min)

- GSC !' Experience !' Core Web Vitals. Both Mobile and Desktop should show "Good URLs". Flag any "Poor" or "Needs improvement" pages.
- GSC !' Search results. Compare clicks and impressions to previous month. Declining impressions can signal a ranking drop.
- GSC !' Links. Verify the site has inbound links; note any new domains linking to pennylanehomesolutions.com.

Quarterly — Full audit (30 min)

- Re-run Google Rich Results Test (search.google.com/test/rich-results) !' enter homepage URL !' confirm FAQPage and LocalBusiness schemas are valid.
- Check sitemap is still returning 200 at <https://pennylanehomesolutions.com/sitemap.xml>.
- Review GBP listing for outdated info (hours, photos, description) and update if needed.

WHO DOES WHAT — VERIFICATION SPLIT REFERENCE

The most common point of confusion: agency adds the DNS record, but Brandon must click Verify.

1	Brandon opens GSC	Brandon	brandon.boyd.po@gmail.com	Generates the TXT verification string in his GSC session.
2	Brandon copies TXT value	Brandon	brandon.boyd.po@gmail.com	Sends the google-site-verification=... string to the agency.
3	Agency adds TXT record	Agency	dash.cloudflare.com	Type: TXT, Name: @, Proxy: OFF. Then refreshes GSC.
4	Brandon clicks Verify	Brandon	search.google.com/search-console	Must be done from his logged-in Google account in his GSC session.
5	Brandon grants access	Brandon	GSC !> Settings !> Users	Adds creativecodertech@gmail.com as a user.
6	Agency confirms access	Agency	creativecodertech@gmail.com GSC	Checks property appears in the property dropdown.

OWNERSHIP RULE — Read Before Every GSC Action

Brandon Boyd (brandon.boyd.po@gmail.com) is the permanent owner of the GSC property and Google Business Profile. Creativecoders LLC is a manager/owner by delegation only.

Agency must NEVER: click Verify on Brandon's behalf, create a GSC property under the agency Google account, or remove Brandon as a user from any Google property.
